SUMMARY

High-velocity Mobile Engineer specializing in Native Android Development (Kotlin, Jetpack Compose) and AI-Augmented Software Workflows (Claude, Antigravity). Proven track record of building and shipping production-grade mobile applications to the Google Play Store with 10,000+ total downloads and 600+ Daily Active Users (DAU). Strong expertise in engineering resilient Android Background Services, real-time push notifications, geospatial/map telemetry, and data-driven product analytics via Firebase. Full end-to-end ownership spanning product design, mobile architecture, backend integration, and store release in rapid 1–3 day sprint cycles.

CORE COMPETENCIES

- **Mobile Engineering:** Native Android, Kotlin, Jetpack Compose, Android SDK, Android Lifecycle, Background Services, Foreground Services, WorkManager.
- **Real-Time & Networking:** RESTful APIs, WebSockets, Real-Time Geolocation & Maps, Local P2P Networking, Push Notifications (Firebase Cloud Messaging).
- **AI & Modern Tooling:** Agentic AI Workflows (Claude, Antigravity), Prompt Engineering, Rapid End-to-End Prototyping.
- **Monitoring & Analytics:** Firebase (Analytics, Crashlytics, FCM, Remote Config), Custom Event Tracking, User Funnel Analysis, Performance Monitoring.
- **Architecture & Web:** Clean Architecture, MVVM, Git/GitHub, TypeScript, Next.js, Python (FastAPI), PostgreSQL, SQLite / Room.

WORKING EXPERIENCE

Independent Fullstack Web & Mobile Developer

Jan 2024 – Present

Self-Employed / Product Builder

- Architected, built, and shipped 5+ native Android production applications to the Google Play Store, driving 10,000+ total downloads and 600+ Daily Active Users (DAU).
- Spearheaded AI-augmented development workflows using AI agent, shrinking 0-to-1 delivery cycles from multi-week development timelines into rapid 1–3 day sprints per production release.
- Exercised full end-to-end ownership: translated raw product requirements into polished UI/UX, implemented reactive Jetpack Compose frontends, connected realtime backend pipelines, and managed Google Play Console compliance and release tracks.
- Instrumented live production monitoring using Firebase Crashlytics & custom event telemetry, achieving 99.5%+ crash-free sessions and triaging performance anomalies across diverse budget Android devices.
- Leveraged 3 years of prior web engineering background (TypeScript, modern fullstack) to build companion web gateways (e.g., zero-install browser receivers for P2P transfers).

EDUCATION

UIN Sunan Kalijaga Yogyakarta

Aug 2022 - 2026 (Expected)

Bachelor of Science in Informatics / Computer Science (S1)

- Focus Areas: Fullstack Web Engineering, Mobile Application Development, Interactive Data Visualization, Real-Time Monitoring Systems, Algorithms & Data Structures, and Database Systems.
- Academic Activities: Active participant in national programming contests, software engineering hackathons, and developer study groups.

CERTIFICATION

- Harvard CS50x: Introduction to Computer Science — Harvard University / edX (2023)
- Certificate of Achievement: 2nd Place Winner — INTECH FEST Web Design Competition (2024)
- Certificate of Achievement: 3rd Place Winner — I/O FEST National Web Development (2025)
- Certificate of Finalist — National Innovation Week (NIWC) 3.0 (2025)

KEY MOBILE PRODUCTION PROJECTS

Care360 — Real-Time Telemetry & Interactive Geospatial Mobile App

Tech: Kotlin, Jetpack Compose, 3D Maps API, WebSockets, Firebase | Solo End-to-End Build

- Engineered an active real-time location tracking and telemetry mobile application featuring interactive 3D map rendering and live coordinate updates.
- Implemented persistent, battery-efficient Android Background Location Services, ensuring uninterrupted tracking during deep-sleep states and device movement.
- Built bi-directional event synchronization and low-latency alert mechanisms for instant boundary trigger notifications.

AirDrop X — High-Performance P2P File Transfer & Utility Engine

Status: Live on Google Play Store (3000+ Downloads, 300+ DAU)

Tech: Kotlin, Jetpack Compose, Wi-Fi Direct, FCM

- Architected a robust utility tool on Google Play Store reaching 300+ DAU within a week of deployment.
- Developed resilient background file-processing services with dynamic notification progress indicators and foreground service state management.
- Integrated Firebase Cloud Messaging (FCM) and customized event telemetry to monitor transfer completion rates, network latency drops, and user retention.

Android Utility Apps (3+ Published Play Store Apps)

Status: Live on Google Play Store (10,000+ Total Downloads, 600+ Cumulative DAU)

Tech: Kotlin, Android SDK, Storage Access Framework, Firebase Crashlytics

- Developed and deployed multiple native utility tools (Long Screenshot, Sticker Capture) surpassing 10,000+ downloads and 600+ cumulative DAU with organic growth.
- Managed end-to-end Google Play Store deployment lifecycle, including app signing, store release management, policy compliance, and crash-rate monitoring.
- Instrumented multi-touch event analytics via Firebase to optimize user funnels and eliminate UI bottlenecks based on real customer usage data.
